

# CDCL: new head office, new image, new technology

With a presence of more than 30 years in Luxembourg, the Compagnie de Construction Luxembourgeoise, earlier known as CDC, offered itself a rejuvenation treatment in 2012: a new name, an opening on the Greater Region, a new positioning, but also a brand new headquarter in Leudelange. The new building is a small jewel of progress and innovation both in terms of construction and in terms of the newest equipment in low energy consumption and emerging technologies. Starting from a wish of progress, it was only natural that CDCL should choose Telindus who was already a partner supplier of the group, in order to consider a global, efficient, secured and cost-effective solution.

**The challenge:** move the computer facility of the servers or go further with a global communication solution?

At the beginning of the exchange between CDCL and Telindus, the company was not particularly oriented towards the Cloud. It was in fact considering a traditional move of the servers with all the logistic and security hassles that this would imply.

The idea to bring fibre to the new building's site then imposed itself, not least for all the communication possibilities that it would offer. Moreover, CDCL did not wish its data to leave Luxembourg to be housed in datacenters located abroad, this, of course, for security and confidentiality reasons.

Finally, so as to meet the construction business' requirements in terms of mobility, it came to making highly efficient communication and telephony solutions available for the teams and thus allowing them to contact and stay in touch with their customers and suppliers. With its Telecom Telindus U-touch solution, Telindus has responded perfectly to all of these requests.

## The Telindus solution: a global, efficient answer, at the forefront of progress

With Telindus Telecom's Cloud solutions, CDCL frees itself completely from the constraints of managing its own technical infrastructure, whether IT or communication.

In addition to the U-flex solution, which allows a global sharing of the servers and storage of the company within Telindus Telecom's data center, there's also the U-touch solution that has been deployed to meet CDCL's needs for unified communications.

With U-touch, all requirements concerning modernity, accessibility and flexibility have been satisfied: latest generation telephone sets with messaging tools, high performance contact and agenda management, the elimination of "paper" faxes in favour of IP, etc. Data, image and voice, everything is now fully globalized with guaranteed service continuity.

Managed entirely by Telindus Telecom, the "all-in-one" U-touch solution will evolve automatically over time in terms of innovation, allowing CDCL to benefit from new features on a permanent basis in a totally controlled and secured context.

The offer also allows monitoring the company in its development by adapting the features and equipment parks to its needs and the increasing or decreasing number of workstations.

This flexibility is in itself a significant added value for companies in whose eyes technology, IT or telephony are no core businesses.

## The result: new operational headquarters, controlled costs, fresh impetus

By equipping its new head office with newest technological innovations in terms of Information Technologies and Communications, CDCL can now boast a saving of 5 to 10% of its "IT & Telephony" budget items.

This economy is accompanied by "a major step forward in terms of facilities to communicate internally or externally, and provides an image enhancement of CDCL".

There is also the possibility to develop the solution further by relying on a trusted partner, Telindus, who with the U-touch solution, has successfully adapted to the specificities of a growing company focussing on its rapidly evolving core business.

Proud of its new headquarters, CDCL now rents workspaces to any company wishing to have offices readily equipped with the latest technological innovations.

*"I encourage all companies, whatever their size, to think about this all-in-one solution, which is not only intended for large structures. A company must keep pace by entrusting professional hands such as Telindus' with the management of all sorts of IT and logistic hassles."*

## CDCL in a Nutshell

The "Compagnie De Construction Luxembourgeoise" has been a key player within the construction sector in Luxembourg for more than 30 years now.

Founded by a group of 3 Luxembourgish companies in 1979, CDC is a business which realises large-scale projects.

In January 2012, in order to assert its international expansion, CDC becomes CDCL and deploys its new brand on construction sites in Luxembourg and France.

This new image is accompanied by the construction of their new headquarters in Leudelange, a genuine showcase of their expertise in innovation (building with low energy consumption, 6500 m<sup>2</sup> office space spread over 4 levels, of which half is occupied by CDCL and the other part is rented to other companies).
